Classwork: Regents review

1. Given the function f represented in the table below.

x	$f(x)$
-2	5
-1	0
0	1
1	-2
2	2

(a) What is the x-intercept?

(b) For what x is $f(x)$ minimum?

(c) What is the y-intercept of the function?

2. A \$4,250 investment earning a continuous interest rate of 3.25% over 3 years would be worth how much?

3. Explain how $\left(3^{\frac{1}{3}}\right)^2$ can be written as the equivalent radical expression $\sqrt[3]{9}$.

4. Given i is the imaginary unit, simplify $(2 - xi)^2$ to the form $a + bi$.

Classwork: Regents review

5. Consider the function $h(x) = 2\sin(x) + 1$.
   What is the minimum value of $h(x)$ for the domain $[0, 2\pi]$? Justify your answer by sketching a graph.

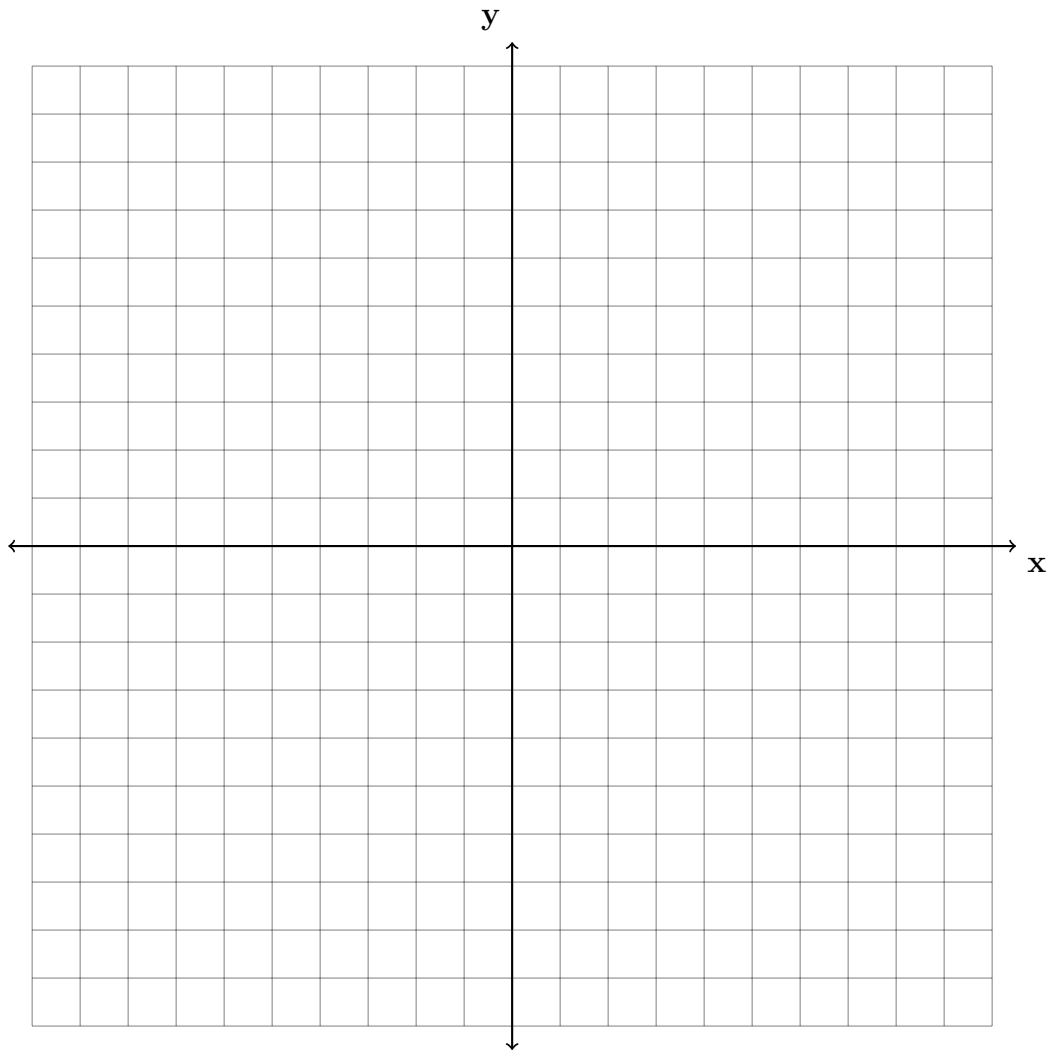
6. Sketch a graph of a cubic polynomial with the following characteristics:

   - three zeros: the origin, one positive, one negative
   - as $x \to +\infty$, $f(x) \to -\infty$
   - as $x \to -\infty$, $f(x) \to +\infty$

   What is the sign of the function's leading coefficient?

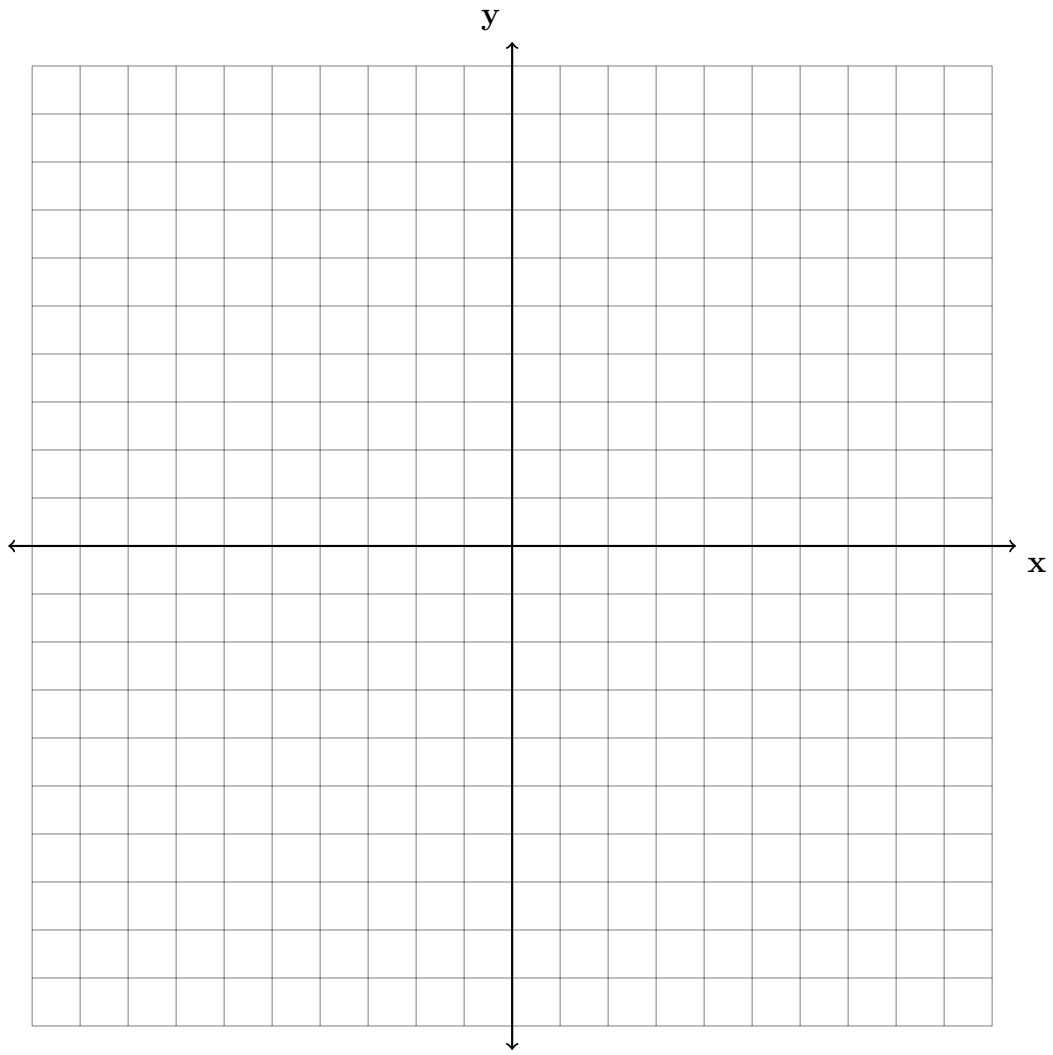
Classwork: Regents review

7. On the axes below, graph one cycle of a cosine function with amplitude 3, period $\frac{\pi}{2}$, midline $y = -1$, and passing through the point $(0, 2)$.



Classwork: Regents review

8. Graph $y = \log_2(x+3) - 5$ on the set of axes below. Use an appropriate scale to include both intercepts.



Describe the behavior of the given function as x approaches -3 and as x approaches positive infinity.
