9.3 Do Now: Transformations

1. A transformation is applied to a triangle, $\triangle CAT \rightarrow \triangle C'A'T'$. Circle True or False to identify each transformation correctly represented below.

T F Translated six to the left, down zero

T F Reflected across the y -axis

T F $(x, y) \rightarrow (x - 6, y + 0)$

T F Rotated 90° counterclockwise around the origin

T F A slide six units to the right

2. Determine and state the transformation mapping $\triangle ABC$ onto $\triangle DEF$. Also, make a mapping table of the coordinate pairs.

3. First reflect the trapezoid $BECA$ across the x -axis, then move it left five and up two. Label the images $B'E'C'A'$ and $B''E''C''A''$.

4. Two translations have been applied to a triangle in the diagram below, $\triangle ABC \rightarrow \triangle A'B'C' \rightarrow \triangle A''B''C''$. Fully characterize each translation.

5. The quadrilateral $ROCK$ undergoes two transformations, shown below. Describe the sequence of transformations applied.
