

### 9-3CW-SSA

Kelly is completing a proof based on the figure below.

She was given that  $\angle A \cong \angle EDF$ , and has already proven  $\overline{AB} \cong \overline{DE}$ . Which pair of corresponding parts and triangle congruency method would *not* prove  $\triangle ABC \cong \triangle DEF$ ?

1. (1)  $\overline{AC} \cong \overline{DF}$  and SAS (3)  $\angle C \cong \angle F$  and AAS
- (2)  $\overline{BC} \cong \overline{EF}$  and SAS (4)  $\angle CBA \cong \angle FED$  and ASA
2. Sketch the triangles first.

In the two distinct acute triangles  $ABC$  and  $DEF$ ,  $\angle B \cong \angle E$ . Triangles  $ABC$  and  $DEF$  are congruent when there is a sequence of rigid motions that maps

- (1)  $\angle A$  onto  $\angle D$ , and  $\angle C$  onto  $\angle F$
- (2)  $\overline{AC}$  onto  $\overline{DF}$ , and  $\overline{BC}$  onto  $\overline{EF}$
- (3)  $\angle C$  onto  $\angle F$ , and  $\overline{BC}$  onto  $\overline{EF}$
- (4) point  $A$  onto point  $D$ , and  $\overline{AB}$  onto  $\overline{DE}$
3. Sketch the triangles first.

Triangles  $JOE$  and  $SAM$  are drawn such that  $\angle E \cong \angle M$  and  $\overline{EJ} \cong \overline{MS}$ . Which mapping would *not* always lead to  $\triangle JOE \cong \triangle SAM$ ?

- (1)  $\angle J$  maps onto  $\angle S$  (3)  $\overline{EO}$  maps onto  $\overline{MA}$
- (2)  $\angle O$  maps onto  $\angle A$  (4)  $\overline{JO}$  maps onto  $\overline{SA}$

In the diagram below,  $\overline{AC}$  and  $\overline{BD}$  intersect at  $E$ .

Which information is always sufficient to prove  $\triangle ABE \cong \triangle CDE$ ?

- (1)  $\overline{AB} \parallel \overline{CD}$
- (2)  $\overline{AB} \cong \overline{CD}$  and  $\overline{BE} \cong \overline{DE}$
- (3)  $E$  is the midpoint of  $\overline{AC}$ .
4. (4)  $\overline{BD}$  and  $\overline{AC}$  bisect each other.
5. Sketch the triangles first.

In the diagram below,  $\overline{AKS}$ ,  $\overline{NKC}$ ,  $\overline{AN}$ , and  $\overline{SC}$  are drawn such that  $\overline{AN} \cong \overline{SC}$ .

Which additional statement is sufficient to prove  $\triangle KAN \cong \triangle KSC$  by AAS?

- (1)  $\overline{AS}$  and  $\overline{NC}$  bisect each other.
- (2)  $K$  is the midpoint of  $\overline{NC}$ .
- (3)  $\overline{AS} \perp \overline{CN}$
- (4)  $\overline{AN} \parallel \overline{SC}$
