9.4 Do Now: Reflection across a line not an axis

1. Which of the following would map $\triangle CAT \rightarrow \triangle C'A'T'$?

- T F Reflected across the y -axis
 T F Translated six to the left, down zero
 T F Reflected across the y -axis, then slid to the left two
 T F $(x, y) \rightarrow (x - 6, y + 0)$
 T F Rotated 90° counterclockwise around the origin
 T F Reflected across the line $x = -1$

2. Draw the line of reflection used to map $\triangle ABC$ onto $\triangle A'B'C'$.

3. Draw the line of reflection for each diagram below.

4. Given two parallel lines are intersected by a transversal, $\overleftrightarrow{MD} \parallel \overleftrightarrow{BC}$. $m\angle AMD = 4x + 5$ and $m\angle MBC = 5x - 7$. Find $m\angle AMD$.

5. In the diagram above, the point M bisects \overline{AB} . If $AM = 4$ find AB .

6. Given two vertical angles, $m\angle 1 = 5x + 9$, $m\angle 2 = 6x - 1$. Find $m\angle 1$.
For full credit, check by comparing to $m\angle 2$.
