

### 9-4bDN-reflection

1. Which of the following would map  $\triangle CAT \rightarrow \triangle C'A'T'$ ?

- T F Reflected across the  $y$ -axis  
 T F Translated six to the left, down zero  
 T F Reflected across the  $y$ -axis, then slid to the left two  
 T F  $(x, y) \rightarrow (x - 6, y + 0)$   
 T F Rotated  $90^\circ$  counterclockwise around the origin  
 T F Reflected across the line  $x = -1$

2. Draw the line of reflection used to map  $\triangle ABC$  onto  $\triangle A'B'C'$ .

3. Draw the line of reflection for each diagram below.

4. Determine and state the sequence of transformations applied to map  $BECA$  to  $B'E'C'A'$  and then to  $B''E''C''A''$ .
