

5.11 Spicy PreQuiz: Transversals and parallel lines

Angle relationships

1. Review: Angle postulates and theorems you have learned.
 - (a) \perp lines and complementary \angle s make 90°
 - (b) linear pairs add to 180°
 - (c) vertical \angle s are \cong
 - (d) definition of an angle bisector
 - (e) isosceles base angle theorem

2. New theorems for parallel lines

- (a) *corresponding* \angle s of \parallel lines are \cong
 $\angle 2 \cong \angle 6$
- (b) *same-side interior* \angle s are supplementary
 $m\angle 3 + m\angle 5 = 180$
- (c) *alternate exterior* \angle s are \cong
 $\angle 2 \cong \angle 7$

Hint: There are only two angle measures, the acute angles and the obtuse angles (and they add to 180°)

3. Given two parallel lines and a transversal, as shown, with $m\angle 6 = 70^\circ$. Write down the value of each angle measure.

(a) $m\angle 1 =$

(e) $m\angle 5 =$

(b) $m\angle 2 =$

(f) $m\angle 6 =$

(c) $m\angle 3 =$

(g) $m\angle 7 =$

(d) $m\angle 4 =$

(h) $m\angle 8 =$

4. Given two parallel lines and a transversal, with $m\angle 4 = 3x$ and $m\angle 5 = x + 70$.
Write an equation, then solve for x .

5. Two parallel lines intersect a transversal. Given corresponding angles $m\angle 1 = 4.4x - 63$ and $m\angle 2 = 2.8x + 9$, find the measure of $\angle 1$.

6. Given parallel lines $\overleftrightarrow{AB} \parallel \overleftrightarrow{CDE}$ with $\overline{AC} \cong \overline{AD}$. If $m\angle BAD = 80$ find $m\angle ACD$.

7. Two parallel lines intersect a second set of parallel lines. Given $m\angle 2 = 2.8x + 9$ and $m\angle 4 = 4.4x - 63$, find the measure of $\angle 1$.
