9.3b Homework: Transformation practice, graph and state the answer

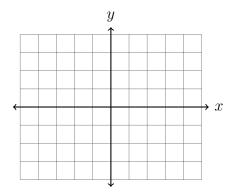

1. Apply the translation $(x,y) \to (x-2,y+4)$ to the point A(2,-1).

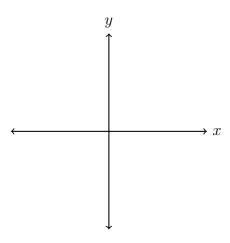

2. What is the image of B(2,4) under a reflection across the x-axis?

3. State the translation that would map C(-3,1) onto C'(4,0).

4. Given $D(1,9) \to D'(4,3)$. Find the image of E(6,-2) with the translation.

5. The image of triangle ABC after a translation is $\triangle A'B'C'$. Is the area of the triangle greater, smaller, or the same after the translation? Justify your answer.

6. On the graph below, draw \overline{AB} , with A(-2,1) and B(6,3), labeling the end points. Determine and state the coordinates of the midpoint M of \overline{AB} and mark and label it on the graph.
