## 3.8 Classwork: Pretest summary statistics review

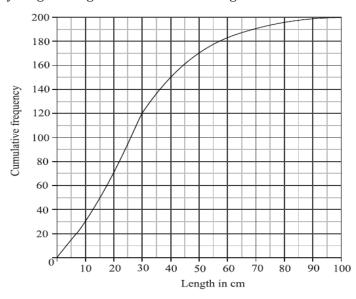

**1a.** A fisherman catches 200 fish to sell. He measures the lengths, *l* cm of these fish, and the results are shown in the frequency table below.

Length l cm	0 ≤ <i>l</i> < 10	10 ≤ <i>l</i> < 20	20 ≤ <i>l</i> < 30	30 ≤ <i>l</i> < 40	40 ≤ <i>l</i> < 60	60 ≤ <i>l</i> < 75	75 ≤ <i>l</i> < 100
Frequency	30	40	50	30	33	11	6

Calculate an estimate for the standard deviation of the lengths of the fish.

[3 marks]

**1b.** A cumulative frequency diagram is given below for the lengths of the fish.

Use the graph to answer the following.

[6 marks]

- (i) Estimate the interquartile range.
- (ii) Given that 40% of the fish have a length more than k cm, find the value of k.
- **1c.** In order to sell the fish, the fisherman classifies them as small, medium or large.

Small fish have a length less than 20 cm.

Medium fish have a length greater than or equal to 20 cm but less than 60 cm.

Large fish have a length greater than or equal to 60 cm.

Write down the probability that a fish is small.

[2 marks]

**1d.** The cost of a small fish is \$4, a medium fish \$10, and a large fish \$12.

Copy and complete the following table, which gives a probability distribution for the cost \$X.

Cost \$X	4	10	12
P(X = x)		0.565	

[2 marks]

1e. Find E(X).

[2 marks]
